

Checklist for your first appointment

Remember to take the following with you:

- A list of any medicines you are taking
- Your current contact lenses (*but do not wear them*)
- Your glasses
- Previous glasses prescriptions for the last 2-3 years

You may find it helpful to write down your questions for the surgeon so you don't forget to ask something important.

As you may be given eye drops that cause blurred vision, it is best to check with the clinic in advance whether you will be able to drive home.
